In Calculus, you can use variable substitution to evaluate a complex integral. Variable substitution allows you to integrate when the Sum Rule, Constant Multiple Rule, and Power Rule don't work. Declare a variable  $u$ , set it equal to an algebraic expression that appears in the integral, and then substitute  $u$  for this expression in the integral.

Two special limits that are important in calculus are  $\lim_{x \rightarrow 0} \frac{\sin x}{x} = 1$  and  $\lim_{x \rightarrow 0} \frac{1 - \cos x}{x} = 0$ . One-Sided Limits Sometimes we are interested in the value that a function  $f$  approaches as  $x$  approaches  $c$  from only a single direction. If the values of  $f$  get arbitrarily close to  $L$  as  $x$  approaches  $c$  while taking on values greater than  $c$ , we say  $\lim_{x \rightarrow c^+} f(x) = L$ .
