Conceptual Design Of Chemical Process

Process Design is the "capstone" course in the chemical engineering curriculum. It used to be divided into Equipment Design and Plant Design. With the publication of Rudd and Watson's "Process Engineering Strategy" in 1968, it was recognized that it's principles can be taught and not "just has to be learned later" by a chemical engineer in his career.

Conceptual Design (CD) is a set of disciplines that contribute to the identification of the optimal design layout and nominal operating conditions of industrial processes. In the field of chemical engineering, CD aims at evaluating the best design variables and operating conditions that maximize the profit.

Conceptual Design - an overview | ScienceDirect Topics

The conceptual process design can start with defining functions (tasks) and integrating these into a process design containing novel process units. Siirola, Eastman Chemicals Corporation describes his method in general terms with the following functions most common to the chemical process industry. After the functions have been synthesised.
