D3.js object might require different layout for the JSON data than the one provided by Data-Driven Content object. This means that some manipulation of the JSON object is required before usage in the D3.js objects. The html page is embedded into the Data-Driven Content object in the report.

### **VA Report Example: Using D3js in your Report - SAS Support ...**

Data Driven Documents (D3.js) is a JavaScript library used to create visualizations of data using HTML, CSS, and SVG. It does this by binding data to the DOM (Document Object Model) and its elements and allowing them to transform when the data changes. For example, let's say we want to create a pie chart of amounts of books in every genre in a library.
