Estimating Damage Caused by Defoliating Insects In soybeans, field scouting to assess insect populations is based on either the number of insects per foot of row, insects per plant, or the level of defoliation. Insects per foot of row is determined by shaking plants over the inter-row space, on which a strip of cloth has

2020 North Dakota Field Crop Insect Management Guide

present or 12-15 aphids per stem, prior to complete heading. Field scouting should begin at stem elongation and continue up to the heading stage of wheat. Aphid populations at or above the thresholds during these growth stages will result in economic injury to plants.
