How to get the current hour with new Date-Time API in Java 8?

The calculation returns a whole number, representing the number of complete units between the two temporals. For example, the amount in hours between the times 11:30 and 13:29 will only be one hour as it is one minute short of two hours. There are two equivalent ways of using this method. The first is to invoke this method directly.

ChronoUnit (Java Platform SE 8)

A time without a time-zone in the ISO-8601 calendar system, such as 10:15:30.. LocalTime is an immutable date-time object that represents a time, often viewed as hour-minute-second. Time is represented to nanosecond precision. For example, the value "13:45.30.123456789" can be stored in a LocalTime.. This class does not store or represent a date or time-zone.

LocalTime (Java Platform SE 8)
