Narcolepsy: Practice Essentials, Background, Pathophysiology

Narcolepsy occurs equally in men and women and is thought to affect roughly 1 in 2,000 people. The symptoms appear in childhood or adolescence, but many people have symptoms of narcolepsy for years before getting a proper diagnosis. People with narcolepsy feel very sleepy during the day and may involuntarily fall asleep during normal activities. In narcolepsy, the normal boundary between awake and asleep is blurred, so characteristics of sleeping can occur while a person is awake.
