Natural Farming By Pig

Natural pig farming is a high pig welfare, non-environmental polluting system of raising healthy, contented pigs that uses the activity of indigineous micro-organisms (IMO's) in the sty's 'living' deep bed pen flooring to rapidly decompose all pig waste. The pig raising system is designed to enable pigs to carry out core natural behavior within a healthy real world environment even though they are raised in pens.

Natural Pig Farming

Natural pig farming provides the solution. Fortunately there is a viable low cost alternative to factory farming available for small and large scale pork producers that ensures higher profits than factory farming based systems whilst respecting

the natural behavior and welfare needs of the pigs.

Natural Pig Farming - Why NPF?

Raising pigs naturally has added a new dimension to our small farm. Instead of using cement slabs and metal fencing, we used run in stalls open on one side, soft straw and sawdust bedding, along with pallet barriers with wood fencing.

How to Raise Pigs Naturally on a Small Farm - Timber Creek ...

Farmers commonly start out with non-organic animals so the sows must undergo the appropriate conversion period before they can produce organic young stock on organic land, and do not ever achieve organic status themselves. Breeding boars that are brought in from non-organic farms should thereafter be reared and fed to organic standards.
