Science Theology And Monogenesis By

Science, Theology, and Monogenesis 223 Although the geographical dispersion of the ancestral population through much of the Old World might make this hypothesis seem to be polyphyletic, its emphasis on the genetic unity of the population, manifested by the flow of genes from one end of the population to the other, makes the theory in a meaningful sense monophyletic, however much it might otherwise blur the distinction.

Science, Theology, and Monogenesis. Francisco Ayala and others have argued that recent genetic evidence shows that the origins of the human race cannot be monogenetic, as the Church has traditionally taught. This paper replies to that objection, developing a distinction between biological and theological species first proposed by Andrew Alexander in 1964.

Monogenism or sometimes monogenesis is the theory of human origins which posits a common descent for all human races. The negation of monogenism is polygenism. This issue was hotly debated in the Western world in the nineteenth century, as the assumptions of scientific racism came under scrutiny both from religious groups and in the light of developments in the life sciences and human science. It was integral to the early conceptions of ethnology. Modern scientific views favor this theory, with
